

CLAIMS

Having described my invention, I claim:

1. A method for securing a tee shirt to a bra, wherein said tee shirt has a lower portion and a neck opening, and wherein said bra has a center web, comprising:
 - a. providing a tee wrap comprising a fabric strip with a first end and a second end, a first side and a second side, a first fastener on said first side proximate said first end, and a second fastener on said second side proximate said second end;
 - b. pulling said lower portion of said tee shirt behind said center web and through said neck opening so that said lower portion forms a first loop around said center web;
 - c. looping said tee wrap around said first loop formed by said lower portion of said tee shirt to form a second loop lying outside said first loop; and
 - d. fastening said second fastener to said first fastener, so that said tee wrap binds said first loop formed by said lower portion of said tee shirt to said center web of said bra.
2. A method as recited in claim 1, wherein said first and second fasteners comprise cooperating strips of hook and loop fastener fabric.
3. A method as recited in claim 2, wherein said first and second fasteners are large enough to allow the diameter of said second loop to be adjusted.

4. In combination with a tee shirt having a lower portion and a neck opening, and a bra having a center web, a tee wrap comprising:
 - a. a fabric strip with a first end and a second end, a first side and a second side;
 - b. a first fastener on said first side of said fabric strip proximate said first end; and
 - c. a second fastener on said second side of said fabric strip proximate said second end.
5. A tee wrap as recited in claim 4, wherein said first and second fasteners comprise cooperating strips of hook and loop fastener fabric.
